HOT TUBS | SWIM SPAS

Pre-Delivery *Guide*

Your journey to ultimate relaxation starts here

PLEASE READ BEFORE BOOKING YOUR DELIVERY

WELCOME TO THE FAMILY

Let's get you *ready.*

This guide will help you prepare for the safe delivery and setup of your hot tub. It covers choosing your location, building the base, electrical requirements and delivery access.

Please take the time to read it before we arrange your delivery date.

> **IMPORTANT**
>
> Not following the steps in this guide may result in damage to your hot tub, a rescheduled delivery or a voided warranty.

PREPARATION

Before your delivery *is booked*

Having a hot tub delivered is an exciting time. We want you fully prepared for a smooth delivery and years of enjoyment.

When your hot tub is in stock or arriving soon, we'll contact you to arrange a delivery date, usually about two weeks ahead.

Please make sure every requirement is met before we call. When we book your date, we'll ask you to confirm each one.

> **TOP TIP**
>
> Book your electrician early and build your base ahead of time. In spring and summer they get busy fast.

Agree on the location

Choose a safe spot with full access to the hot tub once installed. See page 4.

Prepare a flat, level, solid base

A simple patio stone base, built and level before delivery. See page 4.

Have your electrical installed

A licensed electrical contractor must complete the supply before delivery. See page 5.

Measure your route and space

Check that the delivery path and final position have enough room. See page 6.

Send us access photos

Photos or a short video of your driveway, side passages and final position. See page 7.

PREPARATION

Positioning *& your base*

Positioning your hot tub

Never place your hot tub under or near overhead power lines.

- Near a slope, dip or low spot? Make sure there's drainage so ground water can run off.
- Keep the area in front of the tub clear of grass and debris so it isn't carried into the water.
- Leave about **500 mm (20 in)** behind the tub for a cover lifter to drop the cover down.
- Avoid roof drip lines, where snow and ice can slide off onto the tub or cover.
- Plan a short, safe path from your door. You'll use it in January too.

TOP TIP

Think efficiency. A tub on an exposed hilltop fights the wind to stay warm. A sheltered spot, privacy screen or gazebo saves energy all winter.

DECKS AND IN-GROUND INSTALLS

We don't recommend building decking around the tub or setting it into the ground, as it makes future service much harder. If you do, have a structural engineer confirm the deck can carry the full weight, and keep the tub about **200 mm (8 in)** above the deck so the cover can clip on.

Building your base

Your base must be solid, flat and level, and stay that way for the life of the hot tub. You don't need a concrete pad. Our recommended base is simpler and works great.

OUR RECOMMENDED BASE

A frame of **4x4 pressure-treated lumber** with **two beams across the middle**, filled with **crushed rock** and topped with **patio stones**.

1. Build the 4x4 frame at least the size of your hot tub, with two beams across the middle.
2. Set it on firm ground and make it level.
3. Fill with crushed rock, compacting it as you go.
4. Lay patio stones on top so the surface is flat and level.

- A concrete pad also works, but it isn't required. New concrete must fully cure before delivery.
- Grass, sand, soil or loose stone on their own are not suitable.
- Plan for a filled weight of at least **2,000 kg (4,400 lb)** with bathers.

IMPORTANT

We need access to all sides of the hot tub, including the service panel on the same side as the control panel. Damage caused by an unsuitable base or base failure may void your manufacturer's warranty. Obstacles may mean rescheduling, and return visits may be charged.

PREPARATION

Electrical *requirements*

Your electrical supply must be fully installed before delivery day. Every hot tub needs its own dedicated circuit from your main panel. The supply should never be shared.

240V HOT TUBS (MOST MODELS)

1. Hire a **Licensed Electrical Contractor (LEC)**. In Ontario, they file the notification with the Electrical Safety Authority (ESA).
2. Install a dedicated 240V circuit sized to your model's spec sheet. **50 amp and 60 amp hot tubs require 6 gauge wire: 6/3 TECK cable.**
3. Install a **GFCI panel** (spa disconnect) within sight of the hot tub, typically at least **1.5 m (5 ft)** from its edge. Your electrician confirms the exact rules.
4. Leave enough cable to reach the hot tub's control box, on the same side as the control panel.
5. Arrange for your electrician to make the final hookup. We'll help you coordinate timing.

120V PLUG AND PLAY MODELS

- Needs a dedicated, GFCI-protected outdoor receptacle with a weatherproof cover.
- **Never use an extension cord.**
- Some models can be converted to 240V later for faster heating. Ask us.

IMPORTANT

All electrical work, including the GFCI panel, must be installed by a licensed electrician. If it isn't finished and inspected, we can't install your hot tub on delivery day.

Electrical Safety Authority
Hiring an LEC, notifications and inspections in Ontario

This page is general guidance only. Your licensed electrician is responsible for meeting the Ontario Electrical Safety Code and your hot tub's installation manual.

ACCESS

Access *requirements*

It's your responsibility to make sure there's enough room to deliver your hot tub. You'll need a clear path at least **1 m (39 in) wide** and **2.4 m (8 ft) high**.

Not sure? Ask our team before confirming delivery.

1. Clear space around parked cars for our delivery vehicle.
2. Tell us about steep slopes and the number of steps.
3. Check corner clearances for tight turns.
4. Check height limits: low trees, roof eaves, eavestroughs and wires.
5. Move dog runs, BBQs, play equipment, patio furniture and sheds.
6. Watch for gas, hydro and water meters, A/C units and vents.
7. Check widths: gates, pathways, window ledges, downspouts and fence posts.

CRANES AND BOOM TRUCKS

If slopes, retaining walls, steps or level changes block the way, contact us. A crane or boom truck may be needed. This is an extra cost, arranged and paid directly by you with a third-party company. We will never lift a hot tub over a wall by hand.

Swim spas are usually delivered by crane due to their weight.

PLEASE NOTE

Once in position, it's there to stay. Make sure the tub goes in its final spot while the crane is on site. The tub also sits 150 to 200 mm (6 to 8 in) higher on our moving equipment.

MAINTENANCE ACCESS

Leave at least **600 mm (24 in)** of clearance around the tub for future service. If that isn't possible, the tub must be drained and moved before any service visit, at your cost. Think about furniture, decking and room for steps.

DELIVERY

Your pre-delivery *checklist*

Complete this checklist before we book your delivery. Questions? Call or text us anytime.

ACCESS

- [ ] On delivery day, all vehicles are moved off the driveway
- [ ] The driveway and path are flat and clear
- [ ] If we cross a neighbour's property, I have their permission (we can't proceed without it)

LOCATION

- [ ] My path is at least 1 m (39 in) wide and 2.4 m (8 ft) high
- [ ] I've left 500 mm (20 in) behind the tub for a cover lifter
- [ ] Nothing narrows the path: window ledges, gas lines, downspouts, meters, gate posts, pergolas or arches
- [ ] If there's decking, the step up is under 30 cm (12 in) and it can carry the full weight
- [ ] A garden hose reaches the hot tub for filling

POSITION

- [ ] There are fewer than three steps
- [ ] No walls or rock gardens with a step higher than 30 cm (12 in)
- [ ] The base is flat, level and solid
- [ ] Plants and furniture have been moved
- [ ] No fences, hedges or shrubs block the way

ELECTRICAL

- [ ] 240V: dedicated circuit and GFCI panel installed by a licensed electrician (6/3 TECK cable for 50 and 60 amp models)
- [ ] 120V: dedicated GFCI outdoor receptacle installed, no extension cord
- [ ] ESA notification filed by my electrician

ACTION FOR YOU

Email photos or a short video with your name and order number:

- [ ] The driveway, showing how to reach the backyard
- [ ] Any side passages
- [ ] The backyard
- [ ] The final hot tub position
- [ ] A walk-through video from the road to the final spot

IMPORTANT

Delivery will not be booked until we've received your photos or video and confirmed access is suitable. Return visits caused by poor access, an unsuitable base, or electrical or water supply problems may be charged.

Answered **no** to anything? Contact us before delivery day.

DELIVERY

Your delivery *day*

We'll confirm your delivery window ahead of time and give you a call when our team is on the way.

1. **Unload.** Our team stands your hot tub on its side on a spa dolly.
2. **Position.** We move it along your path and set it in its final spot on your base.
3. **Level check.** We make sure it's sitting flat and level, with the service panel accessible.
4. **You take it from here.** We don't fill the hot tub. Once your electrician has completed the hookup, your Owner's Manual walks you through filling and first start-up, step by step.
5. **Ask us anything.** No question is too small.

PLEASE NOTE

You'll receive a chemical starter kit and your Owner's Manual. Have your garden hose ready, since you'll be filling the tub yourself.

START CLEAN WITH O-CARE

When you fill your hot tub for the first time, start it on a healthy diet. Register your O-Care plan and add it from week one.

Scan to set up your O-Care plan

WINTER DELIVERY

Once you fill it, keep the power on and the tub running. Never leave water in a tub that is switched off in freezing weather.
